- Understand and translate the RESTSCENE product strategy; business goals and processes into the required IT solution.
- Research; analyze and recommend solutions that meet the business needs for the RESTSCENE product.
- Analyze business requirements; explore and evaluate various options; configure the application to meet
- Work with business units and product owners to crystallize business needs into product features, acting as a bridge between business and technical domains for RESTSCENE.
- Consult with business units on feasibility, technical requirements, and cost estimates for IT solutions of

RESTSCENE.

- Work with other engineering managers, engineers & QA to develop solutions that meet market needs, functionality, performance, reliability, realistic implementation schedules, and adherence to development goals and principles of RESTSCENE.
- Provide technical guidance, domain thought-leadership, and assistance to the respective team members.
- Identify areas of technical improvement and make detailed business cases for improvements or new areas of opportunities.
- Develop new team capabilities to ensure continued competence and relevance in supporting software development needs of RESTSCENE 's business.
- Define and devise processes, tools, and methodologies to achieve excellence in software development, testing, and deployment.
- Own the team's deliverables of RESTSCENE 's business and ship high quality, maintainable software
- Layout technical vision for RESTSCENE, and follow up to ensure a healthy prioritized backlog in alignment with the product goals, is maintained.
- Collaborate with product owners/managers, business units, analytics to brainstorm, and build the next generation of RESTSCENE and scale it.
- Think ahead, build with the future in mind and push the bar to solve complex technical challenges of scale and performance
- Maintain a balance between short term and long-term goals while shipping high impact products quickly
